

# **ANNUAL SYNAR REPORT**

**42 U.S.C. 300x-26**

OMB № 0930-0222

**FFY 2017**

**State: Pennsylvania**

## Table of Contents

Introduction.....	i
FFY 2017: Funding Agreements/Certifications.....	1
Section I: FFY 2016 (Compliance Progress).....	2
Section II: FFY 2017 (Intended Use).....	12
Appendix A: Forms 1–5.....	16
Form 1: Summary of Synar Inspection Results by Stratum .....	17
Form 3: Summary of Clusters Created and Sampled.....	18
Form 4: Inspection Tallies by Reason of Ineligibility or Non-Completion.....	19
Form 5: Synar Survey Inspector Characteristics. ....	20
Appendix B: Synar Survey Sampling Methodology .....	21
Appendix C: Synar Survey Inspection Protocol Summary.....	33
Attachments .....	37
Attachment 1: Calculation of Weighted Retailer Violation Rate Explanation.....	38
Attachment 2: Calculation of Weighted Retailer Violation SAS Programming Code.....	43
Attachment 3: Weight Check and Weights Table.....	52
Attachment 4: Survey Means Tables .....	54
Attachment 5: 2015 Survey Report (Synar Inspection) Form .....	56
Attachment 6: Survey Procedures (Inspection Protocols) .....	57

## INTRODUCTION

The Annual Synar Report (ASR) format provides the means for states to comply with the reporting provisions of the Public Health Service Act (42 U.S.C. 300x-26) and the Tobacco Regulation for the Substance Abuse Prevention and Treatment Block Grant (SABG) (45 C.F.R. 96.130 (e)).

### **How the Synar report helps the Center for Substance Abuse Prevention**

In accordance with the tobacco regulations, states are required to provide detailed information on progress made in enforcing youth tobacco access laws (FFY 2016 Compliance Progress) and future plans to ensure compliance with the Synar requirements to reduce youth tobacco access rates (FFY 2017 Intended Use Plan). These data are required by 42 U.S.C. 300x-26 and will be used by the Secretary to evaluate state compliance with the statute. Part of the mission of the Center for Substance Abuse Prevention (CSAP) is to assist states<sup>1</sup> by supporting Synar activities and providing technical assistance helpful in determining the type of enforcement measures and control strategies that are most effective. This information is helpful to CSAP in improving technical assistance resources and expertise on enforcement efforts and tobacco control program support activities, including state Synar program support services, through an enhanced technical assistance program involving conferences and workshops, development of training materials and guidance documents, and onsite technical assistance consultation.

### **How the Synar report can help states**

The information gathered for the Synar report can help states describe and analyze substate needs for program enhancements. These data can also be used to report to the state legislature and other state and local organizations on progress made to date in enforcing youth tobacco access laws when aggregated statistical data from state Synar reports can demonstrate to the Secretary the national progress in reducing youth tobacco access problems. This information will also provide Congress with a better understanding of state progress in implementing Synar, including state difficulties and successes in enforcing retailer compliance with youth tobacco access laws.

---

<sup>1</sup>The term “state” is used to refer to all the states and territories required to comply with Synar as part of the Substance Abuse Prevention and Treatment Block Grant Program requirements (42 U.S.C. 300x-64 and 45 C.F.R. 96.121).

**SECTION I: FFY 2016 (Compliance Progress)**

**YOUTH ACCESS LAWS, ACTIVITIES, AND ENFORCEMENT**

42 U.S.C. 300x-26 requires the states to report information regarding the sale/distribution of tobacco products to individuals under age 18.

**1. Please indicate any changes or additions to the state tobacco statute(s) relating to youth access since the last reporting year. If any changes were made to the state law(s) since the last reporting year, please attach a photocopy of the law to the hard copy of the ASR and also upload a copy of the state law to WebBGAS. (see 42 U.S.C. 300x-26).**

**a. Has there been a change in the minimum sale age for tobacco products?**

Yes  No

*If Yes, current minimum age:*  19  20  21

**b. Have there been any changes in state law that impact the state's protocol for conducting Synar inspections?**

Yes  No

*If Yes, indicate change. (Check all that apply.)*

- Changed to require that law enforcement conduct inspections of tobacco outlets
- Changed to make it illegal for youth to possess, purchase or receive tobacco
- Changed to require ID to purchase tobacco
- Changed definition of tobacco products
- Other change(s) *(Please describe.)* \_\_\_\_\_

**c. Have there been any changes in state law that impact the following?**

- Licensing of tobacco vendors  Yes  No
- Penalties for sales to minors  Yes  No
- Vending machines  Yes  No
- Added additional product
- Categories to youth access law  Yes  No

**2. Describe how the Annual Synar Report (see 45 C.F.R. 96.130(e)) and the state Plan (see 42 U.S.C. 300x-51) were made public within the state prior to submission of the ASR. (Check all that apply.)**

- Placed on file for public review
- Posted on a state agency Web site *(Please provide exact Web address and the date when the FFY 2017 ASR was posted to this Web address.)*

*Web address:* <http://www.ddap.pa.gov/Pages/Annual-Reports.aspx>

*Date published:* December 22, 2016

- Notice published in a newspaper or newsletter
- Public hearing

- Announced in a news release, a press conference, or discussed in a media interview
- Distributed for review as part of the SABG application process
- Distributed through the public library system
- Published in an annual register
- Other *(Please describe.)* Notice under Announcements on Agency Web Site

**3. Identify the following agency or agencies** *(see 42 U.S.C. 300x-26 and 45 C.F.R. 96.130).*

- a. The state agency (ies) designated by the Governor for oversight of the Synar requirements:**

The Pennsylvania Department of Health (DOH)

Has this changed since last year's Annual Synar Report?

- Yes  No

- b. The state agency(ies) responsible for conducting random, unannounced Synar inspections:**

The Pennsylvania Department of Health (DOH)

Has this changed since last year's Annual Synar Report?

- Yes  No

- c. The state agency(ies) responsible for enforcing youth tobacco access law(s):**

DOH Bureau of Health Promotion & Risk Reduction, Division of Tobacco Prevention & Control (DTPC)

Has this changed since last year's Annual Synar Report?

- Yes  No

**4. Identify the following agencies and describe their relationship with the agency responsible for the oversight of the Synar requirements.**

- a. Identify the state agency responsible for tobacco prevention activities (the agency that receives the Centers for Disease Control and Prevention's National Tobacco Control Program funding).**

DOH Bureau of Health Promotion & Risk Reduction, Division of Tobacco Prevention & Control (DTPC)

- b. Has the responsible agency changed since last year's Annual Synar Report?**

- Yes  No

- c. Describe the coordination and collaboration that occur between the agency responsible for tobacco prevention and the agency responsible for oversight of the Synar requirements. (Check all that apply.) The two agencies**

- Are the same
- Have a formal written memorandum of agreement
- Have an informal partnership
- Conduct joint planning activities
- Combine resources
- Have other collaborative arrangement(s) *(Please describe.)* \_\_\_\_\_
- No relationship

**d. Does a state agency contract with the Food and Drug Administration’s Center for Tobacco Products (FDA/CTP) to enforce the youth access and advertising restrictions in the Family Smoking Prevention and Tobacco Control Act?**

- Yes    No (if no, go to Question 5)

**e. If yes, identify the state agency responsible for enforcing the youth access and advertising restrictions in the Family Smoking Prevention and Tobacco Control Act (the agency that is under contract to the Food and Drug Administration’s Center for Tobacco Products (FDA/CTP)).**

*DOH Bureau of Health Promotion & Risk Reduction, Division of Tobacco Prevention & Control (DTPC)*

**f. Has the responsible agency changed since last year’s Annual Synar Report?**

- Yes    No

**g. Describe the coordination and collaboration that occur between the agency contracted with the FDA to enforce federal youth tobacco access laws and the agency responsible for oversight of the Synar requirements. (Check all that apply.) The two agencies:**

- Are the same
- Have a formal written memorandum of agreement
- Have an informal partnership
- Conduct joint planning activities
- Combine resources
- Have other collaborative arrangement(s) *(Please describe.)* \_\_\_\_\_
- No relationship

**h. Does the state use data from the FDA enforcement inspections for Synar survey reporting?**

- Yes    No

5. Please answer the following questions regarding the state’s activities to enforce the state’s youth access to tobacco law(s) in FFY 2016 (see 42 U.S.C. 300x-26 and 45 C.F.R. 96.130(e)).

a. Which one of the following describes the enforcement of state youth access to tobacco laws carried out in your state? (Check one category only.)

- Enforcement is conducted exclusively by local law enforcement agencies.
- Enforcement is conducted exclusively by state agency(ies).
- Enforcement is conducted by both local *and* state agencies.

b. The following items concern penalties imposed for all violations of state youth access to tobacco laws by **LOCAL AND/OR STATE LAW ENFORCEMENT AGENCIES** (this does not include enforcement of local laws or federal youth tobacco access laws). Please fill in the number requested. If state law does not allow for an item, please mark “NA” (not applicable). If a response for an item is unknown, please mark “UNK.” The chart must be filled in completely.

PENALTY	OWNERS	CLERKS	TOTAL
Number of <u>citations issued</u>	254	UNK	254
Number of <u>finest assessed</u>	UNK	UNK	UNK
Number of <u>permits/licenses suspended</u>	UNK		UNK
Number of <u>permits/licenses revoked</u>	UNK		UNK
Other (Please describe.)	NA	NA	NA

c. Are citations or warnings issued to retailers or clerks who sell tobacco to minors for inspections that are part of the Synar survey?

- Yes  No

If “Yes” to 5c, please describe the state’s procedure for minimizing risk of bias to the survey results from retailers alerting each other to the presence of the survey teams:

While the random sample utilized to conduct the actual Synar survey may include outlets that would also be part of an enforcement check, the two activities are conducted separately. Citations or warnings are not issued to any retailers or clerks when conducting the Synar survey. This is a stand-alone exercise to eliminate any risk of bias.

d. Which one of the following best describes the level of enforcement of state youth access to tobacco laws carried out in your state? (Check one category only.)

- Enforcement is conducted only at those outlets randomly selected for the Synar survey.
- Enforcement is conducted only at a subset of outlets not randomly selected for the Synar survey.
- Enforcement is conducted at a combination of outlets randomly selected for the Synar survey and outlets not randomly selected for the Synar survey.

**e. Did every tobacco outlet in the state receive at least one compliance check that included enforcement of the state youth tobacco access law(s) in the last year?**

- Yes  No

**f. What additional activities are conducted in your state to support enforcement and compliance with state youth tobacco access law(s)?** *(Check all that apply and briefly describe each activity in the text boxes below each activity.)*

- Merchant education and/or training

Merchant education remains on-going through the publication of non-compliance offenders at the local level by the eight Tobacco Regional Primary Contractors (RPCs).

- Incentives for merchants who are in compliance (e.g., nonenforcement compliance checks in which compliant retailers are given positive reinforcement and noncompliant retailers are warned about youth access laws)

- Community education regarding youth access laws

Community education remains on-going by the RPCs and through the publication of non-compliance offenders at the local level. Additionally, the DTTPC, in partnership with the Pennsylvania Alliance to Control Tobacco (PACT) and the RPCs, maintains the statewide youth movement, Tobacco Resistant Unit (TRU). TRU participants work on initiatives that educate the public about tobacco prevention and cessation, including the conduction of tobacco retailer compliance checks.

- Media use to publicize compliance inspection results

RPCs produce media at the local level to publicize non-compliance offenders. Additionally, the Food and Drug Administration (FDA)'s website for their Tobacco Compliance contracts with states lists all outlets in which both Undercover Buy and Advertising and Labeling checks have been conducted. It also lists both successful check results, as well as those found to be in violation of the law. This website serves as a resource to the DTTPC, RPCs and the public.

- Community mobilization to increase support for retailer compliance with youth access laws

The DTPC implements programs to educate state leaders, decision-makers, and the public about the burden of tobacco use and evidence-based policies and other strategies to reduce this burden. Over 90% of tobacco company expenditures are spent on point of sale (POS) marketing in convenience stores, gas stations, pharmacies and other retail outlets. This POS marketing is very effective in reaching kids and influencing them to smoke. To counteract this practice, the Division of Nutrition and Physical Activity collaborated with the DTPC to provide technical assistance, assess program progress and provide trainings and training materials to implement the Healthy Corner Store Initiative (HCSI) with the RPCs, coalition members, stakeholders, and DOH staff. The DTPC continues to expand this effort through a Pennsylvania POS initiative by conducting the following activities: 1) identify POS coordination opportunities by leveraging resources and utilizing tobacco data collected from the current statewide PA HCSI focused on corner stores to increase access to healthy foods and beverages, 2) assess the retail environment through systematic data collection to inform POS activities and action focused on retailers selling tobacco products, 3) educate local community decision-makers and the public by incorporating TRU youth activities and messages that are delivered by youth within communities and 4) encourage tobacco retail owners to sign memorandums of understanding committed to the reduction/elimination of tobacco product signage and sales, to sell nicotine replacement therapy products and post PA Free Quitline materials in their establishments as cost effective ways to promote cessation services.

Other activities (*Please list.*) *Young Lungs at Play; Multi-unit Housing Initiative*

The DTPC has several initiatives that impact compliance with Pennsylvania's tough access law by implementing community-based programs that change community norms through environmental approaches to promote healthy behaviors. Young Lungs at Play (YLAP) was adapted from successful initiatives in Rockland County, New York and Luzerne County, Pennsylvania. YLAP promotes the establishment of tobacco-free parks and playgrounds. Participating communities and organizations receive signs in English and Spanish free of charge to display in tobacco-free areas. YLAP has reached disparate populations across Pennsylvania with considerable success rates in low income and African American areas as well as rural playgrounds and parks. Currently, there are over 769 YLAP programs in local boroughs, townships, municipalities, youth organizations, and school districts, including all recreational parks and playgrounds within the City of Pittsburgh. DTPC maintains an "Honor Roll" listing of YLAP sites on the Pennsylvania Department of Health (DOH) website and a Certificate of Recognition signed by the Secretary of Health is provided to all YLAP participants. Members of the DOH Executive Staff have attended local media events to recognize community-based efforts to create tobacco-free outdoor parks and playgrounds. YLAP became the catalyst to expand the smoke-free multi-unit housing initiative in Pennsylvania. YLAP is present in all 67 Pennsylvania counties and an estimated 75% of youth under the age of 15 live in municipalities or counties participating in YLAP.

Smoke-free multi-unit housing is another key initiative identified by the DTPC. The DTPC developed and implemented a standardized statewide smoke-free multi-unit housing policy initiative. The DTPC identified public housing as the initial focus of the initiative and at the county and regional levels to maximize impact through the RPCs. Strategies include: 1) identifying, educating and mobilizing key stakeholders, specifically those at city and county housing authorities; 2) conducting community education and raising public awareness around the dangers of secondhand smoke in multi-unit housing settings; and 3) providing tobacco cessation resources and referrals to both staff and residents of multi-unity housing sites. To capture policy-focused activities and results, the DTPC staff works with the statewide external evaluator to maintain standardized reporting tools. The primary tool is the Smoke-free Multi-unit Housing Policy Initiative Tracking Sheet, which captures completed and ongoing policy work on a quarterly basis. Pennsylvania has 51 multi-unit housing organizations that have partnered with the RPCs to implement smoke-free policies, and an estimated 25,000 youth and adults have been impacted by these policies and are protected from secondhand smoke as a result.

## SYNAR SURVEY METHODS AND RESULTS

The following questions pertain to the survey methodology and results of the Synar survey used by the state to meet the requirements of the Synar Regulation in FFY 2016 (see 42 U.S.C. 300x-26 and 45 C.F.R. 96.130).

**6. Has the sampling methodology changed from the previous year?**

Yes  No

*The state is required to have an approved up-to-date description of the Synar sampling methodology on file with CSAP. Please submit a copy of your Synar Survey Sampling Methodology (Appendix B). If the sampling methodology changed from the previous reporting year, these changes must be reflected in the methodology submitted.*

**a. If yes, Describe how and when this change was communicated to SAMHSA**

**7. Please answer the following questions regarding the state’s annual random, unannounced inspections of tobacco outlets (see 45 C.F.R. 96.130(d)(2)).**

**a. Did the state use the optional Synar Survey Estimation System (SSES) to analyze the Synar survey data?**

Yes  No

*If Yes, attach SSES summary tables 1, 2, 3, and 4 to the hard copy of the ASR and upload a copy of SSES tables 1–5 (in Excel) to WebBGAS. Then go to Question 8. If No, continue to Question 7b.*

**b. Report the weighted and unweighted Retailer Violation Rate (RVR) estimates, the standard error, accuracy rate (number of eligible outlets divided by the total number of sampled outlets), and completion rate (number of eligible outlets inspected divided by the total number of eligible outlets).**

**Unweighted RVR** 9.4

**Weighted RVR** 9.9

**Standard error (s.e.) of the (weighted) RVR** 1.0

**Fill in the blanks to calculate the right limit of the right-sided 95% confidence interval.**

$$\begin{array}{ccccccc}
 9.9 & + & (1.645 & \times & 1.0) & = & 11.5 \\
 \text{RVR Estimate} & \text{plus} & (1.645 & \text{times} & \text{Standard Error}) & \text{equals} & \text{Right Limit}
 \end{array}$$

**Accuracy rate** 73.4

**Completion rate** 99.0

c. **Fill out Form 1 in Appendix A (Forms 1–5).** (Required regardless of the sample design.)

d. **How were the (weighted) RVR estimate and its standard error obtained?**  
(Check the one that applies.)

Form 2 (Optional) in Appendix A (Forms 1–5) (Attach completed Form 2.)

Other (Please specify. Provide formulas and calculations or attach and explain the program code and output with description of all variable names.)

See Attachments:  
 Attachment 1: Calculation of Weighted Retailer Violation Rate Explanation  
 Attachment 2: Calculation of Weighted Retailer Violation SAS Programming Code  
 Attachment 3: Weight Check and Weights Tables  
 Attachment 4: Survey Means Tables

e. **If stratification was used, did any strata in the sample contain only one outlet or cluster this year?**

Yes  No  No stratification

If Yes, explain how this situation was dealt with in variance estimation.

f. **Was a cluster sample design used?**

Yes  No

If Yes, fill out and attach Form 3 in Appendix A (Forms 1–5), and answer the following question.

If No, go to Question 7g.

**Were any certainty primary sampling units selected this year?**

Yes  No

If Yes, explain how the certainty clusters were dealt with in variance estimation.

g. **Report the following outlet sample sizes for the Synar survey.**

	Sample Size
<b>Effective sample size</b> (sample size needed to meet the SAMHSA precision requirement assuming simple random sampling)	533
<b>Target sample size</b> (the product of the effective sample size and the design effect)	693
<b>Original sample size</b> (inflated sample size of the target sample to counter the sample attrition due to ineligibility and noncompletion)	1,739
<b>Eligible sample size</b> (number of outlets found to be eligible in the sample)	1,277

<b>Final sample size</b> (number of eligible outlets in the sample for which an inspection was completed)	1,265
-----------------------------------------------------------------------------------------------------------	-------

**h. Fill out Form 4 in Appendix A (Forms 1–5).**

**8. Did the state’s Synar survey use a list frame?**

**Yes**    **No**

*If Yes, answer the following questions about its coverage.*

**a. The calendar year of the latest Sampling frame coverage study: 2013**

**b. Percent coverage from the latest Sampling frame coverage study: 99.1**

**c. Was a new study conducted in this reporting period?**

**Yes**    **No**

*If Yes, please complete Appendix D (List Sampling Frame Coverage Study) and submit it with the Annual Synar Report.*

**d. The calendar year of the next coverage study planned: 2018**

**9. Has the Synar survey inspection protocol changed from the previous year?**

**Yes**    **No**

*The state is required to have an approved up-to-date description of the Synar inspection protocol on file with CSAP. Please submit a copy of your Synar Survey Inspection Protocol (Appendix C). If the inspection protocol changed from the previous year, these changes must be reflected in the protocol submitted.*

**a. If Yes, describe how and when this change was communicated to SAMHSA**

**b. Provide the inspection period: From 07/11/16 to 09/13/16**  
MM/DD/YY MM/DD/YY

**c. Provide the number of youth inspectors used in the current inspection year:**

46

NOTE: If the state uses SSES, please ensure that the number reported in 9b matches that reported in SSES Table 4, or explain any difference.

**d. Fill out and attach Form 5 in Appendix A (Forms 1–5). (Not required if the state used SSES to analyze the Synar survey data.)**

## SECTION II: FFY 2017 (Intended Use):

Public law 42 U.S.C. 300x-26 of the Public Health Service Act and 45 C.F.R. 96.130 (e) (4, 5) require that the states provide information on future plans to ensure compliance with the Synar requirements to reduce youth tobacco access.

### 1. In the upcoming year, does the state anticipate any changes in:

Synar sampling methodology  Yes  No

Synar inspection protocol  Yes  No

*If changes are made in either the Synar sampling methodology or the Synar inspection protocol, the state is required to obtain approval from CSAP prior to implementation of the change and file an updated Synar Survey Sampling Methodology (Appendix B) or an updated Synar Survey Inspection Protocol (Appendix C), as appropriate.*

### 2. Please describe the state's plans to maintain and/or reduce the target rate for Synar inspections to be completed in FFY 2017. Include a brief description of plans for law enforcement efforts to enforce youth tobacco access laws, activities that support law enforcement efforts to enforce youth tobacco access laws, and any anticipated changes in youth tobacco access legislation or regulation in the state.

Pennsylvania enacted the Tobacco Settlement Act (Act 2001-77) on June 26, 2001. Chapter 7 of that legislation outlined requirements relative to prevention and cessation activities. The Act established a tobacco use prevention and cessation program with the Department of Health. Seventy percent of funds received through the Tobacco Settlement fund to the Department under Chapter 7 must be awarded to primary contractors to establish comprehensive tobacco control programs within their service areas.

Act 2002-112 amended the youth access to tobacco law, creating a fine structure for both store owners and clerks, as well as increased penalties and license revocation and/or suspension for owners. This Act also restricted placement of vending machines and provided a penalty structure for youth attempting to purchase tobacco. In addition, enforcement authority was expanded to include the Department of Health, County or Municipal Health Departments, Single County Authorities created pursuant to the Pennsylvania Drug and Alcohol Control Act, or Primary Contractors pursuant to Chapter 7 of the Tobacco Settlement Act. The contracts with the eight Regional Primary Contractors (RPCs), who provide services to all sixty-seven counties of the Commonwealth, contains language requiring them to conduct compliance checks on all tobacco retail outlets within their service area. However, with more recent limitations associated with funding, it has been necessary to waive this requirement and instead implement a more strategic and limited approach in conducting enforcement checks within the confines of available resources.

With on-going enforcement, standardization of the compliance check protocol, annual enforcement training and effective statewide partnerships with the Department of Revenue, the Office of the Attorney General Enforcement Division, and the Pennsylvania Justice Systems, the rate of illegal tobacco sales continues to be sustained within the violation rate maximum allowance. The Department of Health continues to collaborate with the RPCs to integrate statewide media retailer education campaigns with initiatives that engage local

communities through customized retailer and community-specific youth access education.

**3. Describe any challenges the state faces in complying with the Synar regulation. (Check all that apply and describe each challenge in the text box below it.)**

- Limited resources for law enforcement of youth access laws

Limitations relative to funding continue to challenge the ability to support effective tobacco prevention strategies and hamper the ability to conduct annual enforcement checks. This negatively impacts the ability to sustain the lower retailer violation rates attained several years ago.

The Single State Authority (SSA) for Substance Abuse, the Pennsylvania Department of Drug and Alcohol Programs (DDAP), is working collaboratively with the DOH, the agency responsible for tobacco prevention and control, to strategize and gauge the most effective measures to be utilized to meet federal and state requirements while adequately addressing tobacco prevention and enforcement activities within the resources available.

While addressing the diminished capacity to maintain adequate enforcement checks specific to the state law prohibiting the sale of tobacco products to minors, Pennsylvania, as a contract recipient of the FDA, has been able to conduct compliance checks on retailers through FDA funding. The addition of these funds and ability to conduct compliance checks under this agreement enhances the state's ability in enforcement activities and sustaining a more reasonable retailer violation rate, absent sufficient funding available through other sources.

- Limited resources for activities to support enforcement and compliance with youth tobacco access laws

- Limitations in the state youth tobacco access laws

- Limited public support for enforcement of youth tobacco access laws

- Limitations on completeness/accuracy of list of tobacco outlets

Pennsylvania is cognizant of the need to clean the list received from the Department of Revenue (DOR) as much as possible prior to creating a sampling frame, without compromising the quality of the frame by erroneously removing outlets that may be eligible and potentially biasing the survey results. This effort has been challenged in recent years through the completeness and accuracy of the list received from DOR due to a new database utilized for retailer licensure. It is believed that the collaborative relationship and open dialogue about data quality between the DDAP, the DOH, DOR and the Pennsylvania Office of the Attorney General has already resulted in improvements to the initial licensed retailer listing. Additional efforts

by DOH, the agency responsible for tobacco enforcement activities and conducting the Annual Synar Survey, to implement cleaning measures prior to sample creation has resulted in marked improvements to survey results. A comparison between the 55.7% reflected in the FFY14 survey (FFY 2015 Annual Synar Report) shows a significant increase in the accuracy rate reported for this period. In the future, additional mechanisms to improve the accuracy rate will be explored, such as supplementing the list through outcomes of enforcement checks. Through such measures the focus will remain to ensure coverage, as well as accuracy, without compromising the integrity of the survey or biasing the results.

- Limited expertise in survey methodology

- Laws/regulations limiting the use of minors in tobacco inspections

- Difficulties recruiting youth inspectors

- Issues regarding the balance of inspections conducted by youth inspectors age 15 and under

The proportion of age groups has been questioned in previous Annual Synar Reports. The recruitment of youth to balance age can prove somewhat difficult, although efforts are made to ensure the survey is as unbiased as possible. As such, greater efforts are concentrated towards creating a cadre of youth that align with the race and ethnic populations of the areas where retailers ply their trade. Pennsylvania believes that the survey practice as a whole is fairly pristine and continues to put forth its greatest effort to ensure an unbiased result through the methodologies executed to conduct the survey.

- Issues regarding the balance of inspections conducted by one gender of youth inspectors

This issue of gender was raised as a question in a prior Annual Synar Report (ASR) where it was necessary to address the gender distribution of youth inspectors utilized to conduct the Annual Synar Survey. The Federal Project Officer raised concerns relative to the number of male youth versus female youth being reported. An analysis of the ASRs dating back to FFY 2002 indicated that representation of males and females has vacillated between the genders, averaging at approximately fifty-two percent (52%) representation by males and nearly forty-eight percent (48%) for females over that fifteen year period. However, as was indicated in prior responses to questions about the recruitment of youth to balance age or gender, such an exercise can prove challenging, although efforts are made to ensure the survey is as unbiased as possible. As such, a greater effort is concentrated towards creating a cadre of youth that align with the cultural representation of the areas being surveyed, that is, youth that align with the race and ethnic populations of the areas where retailers ply their trade. As indicated above, Pennsylvania believes that the

survey practice as a whole is fairly pristine and continues to put forth its greatest effort to assure an unbiased result through the methodologies executed to conduct the survey.

- Geographic, demographic, and logistical considerations in conducting inspections

- Cultural factors (e.g., language barriers, young people purchasing for their elders)

- Issues regarding sources of tobacco under tribal jurisdiction

- Other challenges (*Please list.*)

**APPENDIX A:**  
**FORMS 1-5**

**FORM 1 (Required for all states not using the Synar Survey Estimation System [SSES] to analyze the Synar Survey data.)**

Form 1 reports sampling frame and sample information used to calculate the unweighted retailer violation rate (RVR), using results from the current year's Synar survey inspections.

<b>Summary of Synar Inspection Results by Stratum</b>													
<b>State: <u>Pennsylvania</u></b>													
<b>FFY: <u>2017</u></b>													
(1)		(2)			(3)			(4)			(5)

**APPENDIX B:**  
**SYNAR SURVEY SAMPLING METHODOLOGY**

## APPENDIX B: SYNAR SURVEY SAMPLING METHODOLOGY

State: Pennsylvania  
 FFY: 2017

**1. What type of sampling frame is used?**

- List frame (*Go to Question 2.*)
- Area frame (*Go to Question 3.*)
- List-assisted area frame (*Go to Question 2.*)

**2. List all sources of the list frame. Indicate the type of source from the list below. Provide a brief description of the frame source. Explain how the lists are updated (method), including how new outlets are identified and added to the frame. In addition, explain how often the lists are updated (cycle). (*After completing this question, go to Question 4.*)**

*Use the corresponding number to indicate Type of Source in the table below.*

- 1 – Statewide commercial business list
- 4 – Statewide retail license/permit list
- 2 – Local commercial business list
- 5 – Statewide liquor license/permit list
- 3 – Statewide tobacco license/permit list
- 6 – Other

Name of Frame Source	Type of Source	Description	Updating Method and Cycle
Electronic Cigarette Licensing System (ECLS)	3	Pennsylvania requires a license to sell cigarettes. The ECLS contains a complete list of all locations licensed to sell cigarettes. The database is maintained by the Department of Revenue.	Existing licenses are annually renewed by January 15 <sup>th</sup> . New licenses can be applied for any time.

**3. If an area frame is used, describe how area sampling units are defined and formed.**

**a. Is any area left out in the formation of the area frame?**

- Yes    No

*If Yes, what percentage of the state's population is not covered by the area frame?*

\_\_\_\_\_ %

**4. Federal regulation requires that vending machines be inspected as part of the Synar survey. Are vending machines included in the Synar survey?**

- Yes    No

If **No**, please indicate the reason(s) they are not included in the Synar survey. Please check all that apply.

- State law bans vending machines.
- State law bans vending machines from locations accessible to youth.
- State has a contract with the FDA and is actively enforcing the vending machine requirements of the Family Smoking Prevention and Tobacco Control Act.
- Other (Please describe.) \_\_\_\_\_

If Yes, please indicate how likely it is that vending machines will be sampled.

- Vending machines are sampled separately to ensure vending machines are included in the sample
- Vending machines are sampled together with over the counter outlets, so it is possible that no vending machines were sampled, however they are included in the sampling frame and have a non-zero probability of selection
- Other reasons (Please describe.) \_\_\_\_\_

**5. Which category below best describes the sample design? (Check only one.)**

- Census** (STOP HERE: Appendix B is complete.)

**Unstratified statewide sample:**

- Simple random sample (Go to Question 9.)
- Systematic random sample (Go to Question 6.)
- Single-stage cluster sample (Go to Question 8.)
- Multistage cluster sample (Go to Question 8.)

**Stratified sample:**

- Simple random sample (Go to Question 7.)
- Systematic random sample (Go to Question 6.)
- Single-stage cluster sample (Go to Question 7.)
- Multistage cluster sample (Go to Question 7.)
- Other** (Please describe and go to Question 9.) \_\_\_\_\_

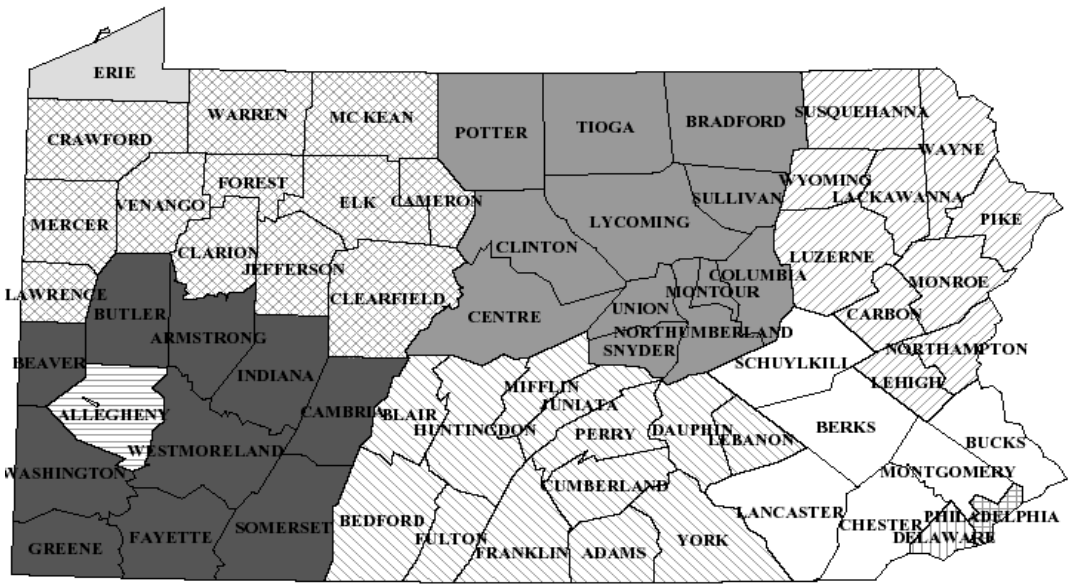

**6. Describe the systematic sampling methods.** (After completing Question 6, go to Question 7 if stratification is used. Otherwise go to Question 9.)

**7. Provide the following information about stratification.**

- a. Provide a full description of the strata that are created.**

Pennsylvania is divided into ten (10) geographic strata. Six of the strata are groups of counties located in specific geographic areas, while the remaining strata are sign-county strata.

Stratum	Geographical Area	Counties
1	North Central (NC)	Bradford, Centre, Clinton, Columbia, Lycoming, Montour, Northumberland, Potter, Snyder, Sullivan, Tioga, Union
2	Northeast (NE)	Carbon, Lackawanna, Lehigh, Luzerne, Monroe, Northampton, Pike, Susquehanna, Wayne, Wyoming
3	Northwest (NW)	Cameron, Clarion, Clearfield, Crawford, Elk, Forest, Jefferson, Lawrence, Mckean, Mercer, Venango, Warren
4	South Central (SC)	Adams, Bedford, Blair, Cumberland, Dauphin, Franklin, Fulton, Huntingdon, Juniata, Lebanon, Mifflin, Perry, York
5	Southeast (SE)	Berks, Bucks, Chester, Lancaster, Montgomery, Schuylkill
6	Southwest (SW)	Armstrong, Beaver, Butler, Cambria, Fayette, Greene, Indiana, Somerset, Washington, Westmoreland
7	Allegheny (AL)	Allegheny
8	Delaware (DE)	Delaware
9	Erie (ER)	Erie
10	Philadelphia (PH)	Philadelphia

b. Is clustering used within the stratified sample?

Yes (Go to Question 8.)

No (Go to Question 9.)

**8. Provide the following information about clustering.**

- a. Provide a full description of how clusters are formed.** *(If multistage clusters are used, give definitions of clusters at each stage.)*

The outlets within the six “District” strata numbered 1 thru 6 (NC, NE, NW, SC, SE and SW) are grouped into geographic clusters of adjacent zip codes. Using the sampling frame and a zip code map, the clusters were created by combining outlets with the same zip code to geographically adjacent zip codes. The sampling frame is a list of all outlet zip codes and cluster ids. Every year a list of cigarette outlets with zip codes is obtained from the Department of Revenue and it is used to populate the sampling frame with outlet addresses by matching zip codes. If a new zip is found on the outlet list, a zip code map is used to update the frame and add that zip to the appropriate cluster. Although the size (number of outlets) of the cluster varies from cluster to cluster, pre-determined limits have been placed on the cluster size. If it is discovered that a cluster has become too large (greater than the sampling interval) it will be divided into two. The clusters are mutually exclusive and exhaustive, covering the entire area of strata 1-6. Strata 7-10 are not clustered. Outlets are randomly selected within those strata.

- b. Specify the sampling method (simple random, systematic, or probability proportional to size sampling) for each stage of sampling and describe how the method(s) is (are) implemented.**

Pennsylvania uses a mix of cluster and random sampling. The entire state is divided into mutually exclusive and exhaustive strata. A two-stage cluster sampling method is used in 6 of the strata while a simple random method is used in the remaining 4 strata.

Within the random 4 strata, each outlet is given a unique random number using the SAS Ranuni function. The Ranuni function returns a number that is generated from the uniform distribution on the interval (0,1) using a prime modulus multiplicative generator with modulus  $2^{31}$  and multiplier 397204094. The outlets within each stratum are sorted by their random number and a pre-determined number of outlets are selected, starting with the first record.

Alternatively, a two-stage cluster sampling method is used in the remaining strata. During stage 1 of the sampling process, clusters are selected with probability proportional to size (number of outlets in the cluster). SAS is used to select both stages of sample. The following describes the method and how it is implemented.

- a. The sampling frame is used to draw the sample. The sampling frame is a file containing cluster level records. Among the variables included are PSU\_ID (cluster identification number), PSUsize (Number of outlets within the cluster), bzip (zip code of the outlet) and zipcount (Number of outlets with the same zip code).
- b. A sampling interval is calculated for each stratum (Stratum size/number of clusters to be selected).

- c. A random start is calculated using the SAS Ranuni function. The random start is calculated by multiplying the random number created by Ranuni by the sampling interval. The result is a number between 1 and the sampling interval (note: Only non-zero random starts are accepted. If the random start is 0, a new random number is used).
- d. The sampling frame file is expanded so each record represents one outlet. This enables the use of probability proportional to size sampling. Since larger clusters will have more records on the file and therefore will have a greater chance of being selected. Conversely, smaller clusters will have fewer records and a lesser chance of being selected.
- e. The file is sorted by PSU\_ID and each record is given a record number according to the new order. The PSU\_ID of that record will identify which cluster must be sampled first. To find the second cluster to sample, add the sampling interval to the record number of the first record selected and the PSU\_ID of that record tells you the 2<sup>nd</sup> cluster to sample. Continue adding the sampling interval until the max number of clusters for that stratum is reached. Repeat the process for the remaining clustered strata. Each stratum is done separately and has a different random start.

**Example of Stage1 sampling from 2008 survey:** The random Start for stratum1, also known as the NC (North Central) Stratum was 33. The sampling interval was 197. It was calculated by dividing the stratum size (number of outlets in stratum1) by the number of clusters we want to sample in stratum1.

$$\text{Sampint} = \text{Stratsize}/\text{Clustnum} = 1182 / 6 = 197.000$$

- (1) Count to record number 33. The Psu\_Id of that record is 65, therefore the first cluster to sample is cluster 65.
- (2) Add the sampling interval (197) to the previously selected record number (33) to obtain the current record number (230). Count to record 230. The Psu\_Id of that record is 76, therefore the second cluster to sample is cluster 76.
- (3) Add the sampling interval (197) to the previously selected record number (230) to obtain the current record number (427). Count to record 427. The Psu\_Id of that record is 143, therefore the Third cluster to sample is cluster 143.
- (4) Add the sampling interval (197) to the previously selected record number (427) to obtain the current record number (624). Count to record 624. The Psu\_Id of that record is 169, therefore the fourth cluster to sample is cluster 169
- (5) Add the sampling interval (197) to the previously selected record number (624) to obtain the current record number (821). Count to record 821. The Psu\_Id of that record is 207, therefore the fifth cluster to sample is cluster 207.
- (6) Add the sampling interval (197) to the previously selected record number (821) to obtain the current record number (1018). Count to record 1018. The

Psu\_Id of that record is 220, therefore the sixth cluster to sample is cluster 220.

Record Number	Strata	Psu_Id	Psusize	Selected cluster

NC	214	Snyder	59	0
NC	218	Tioga	94	0
NC	220	Union	58	1
NC	243	Bradford	59	0

In stage 2, each outlet within the selected cluster is given a unique random number using the SAS Ranuni function. The number of outlets to be selected is pre-determined and the same number is selected from each cluster. The outlets are sorted by their random number and the pre-determined number of outlets is selected beginning with the first record. If supplemental sample is needed, the next available outlet on the list is issued.

**9. Provide the following information about determining the Synar Sample.**

**a. Was the Synar Survey Estimation System (SSES) used to calculate the sample size?**

**Yes** (*Respond to part b.*)

**No** (*Respond to part c and Question 10c.*)

**b. SSES Sample Size Calculator used?**

**State Level** (*Respond to Question 10a.*)

**Stratum Level** (*Respond to Question 10a and 10b.*)

**c. Provide the formulas for determining the effective, target, and original outlet sample sizes.**

**(1) Effective Sample Size.** According to CSAP requirements, the width ( $w$ ) of the upper limit of the confidence interval must be less than or equal to 3 %. Using the equation for the upper limit of a 95% confidence interval of the sample mean  $\bar{x}$  gives

$$\bar{x} + w \quad (S1)$$

Applying the CSAP requirement for  $w$  gives

$$w \leq 3 \quad (S2)$$

Where  $w$  is defined as

$$w = z(s.e.) \quad (S3)$$

Substituting S3 into S2

$$z(s.e.) \leq 3 \quad (S4)$$

Where  $z$  is the critical value of the standard normal distribution for a one sided 95% confidence interval and  $s.e.$  is the standard error or standard deviation estimated from the sample data. Substituting 1.645 for  $z$  and solving equation S4 for  $s.e.$  gives

$$s.e. \leq \frac{3}{1.645} \leq 1.82$$

Therefore the  $s.e.$  must be less than or equal to 1.82 to maintain a width of 3% or less for a right-sided 95% confidence interval.

Ignoring the finite population correction, the  $s.e.$  is defined as,

$$s.e. = \frac{\sqrt{p(1-p)}}{\sqrt{n_e}} \quad (S5)$$

Substituting S5 into S3 gives

$$w = z \left( \frac{\sqrt{p(1-p)}}{\sqrt{n_e}} \right)$$

Solving for  $n_e$  gives the equation for the effective sample size

$$n_e = \left( \frac{z}{w} \right)^2 p(1-p),$$

Where  $z = 1.645$ ,  $w = 0.03$  (both  $z$  &  $w$  are based on 95% one-sided CI with tolerance of 3%) and  $p = 3\%$  over the target rate ( $20\% + 3\% = 23\%$ ).

**(2) Target Sample Size.** The equation is:

$$n_t = \text{Deff}_h \times n_e,$$

$\text{Deff}_h$  is the highest design effect from historical Synar surveys of a similar design.

**(3) Original Sample Size.** The equation is:

$$n_o = \frac{n_t}{r_l r_c} + n_A + n_S;$$

$r_l$  = lowest eligibility rate of historical Synar surveys of similar design.

$r_c$  = lowest completion rate of historical Synar surveys of similar design or 80% (whichever is lower).

$n_A$  = sample added or subtracted needed to fit the clustered sample design.

$n_S$  = supplemental sample.

$n_A$  is the number of sample added or subtracted to guarantee that our precision goals are met and the sample size fits the design. The size of  $n_A$  is estimated after reviewing output created by a SAS program designed to simulate survey outcomes with varying designs.  $n_S$  is the number of supplemental sample allocated to the clustered areas due to sample attrition. Supplemental sample is issued if a cluster does not obtain the minimum number of completions allowed per cluster.

**10. Provide the following information about sample size calculations for the current FFY Synar survey.**

- a. **If the state uses the sample size formulas embedded in the SSES Sample Size Calculator to calculate the state level sample size, please provide the following information:**

**Inputs for Effective Sample Size:**

RVR:

Frame Size:

**Input for Target Sample Size:**

Design Effect:

**Inputs for Original Sample Size:**

Safety Margin:

Accuracy (Eligibility) Rate:

Completion Rate:

- b. **If the state uses the sample size formulas embedded in the SSES Sample Size Calculator to calculate the stratum level sample sizes, please provide the stratum level information:**

- c. **If the state does not use the sample size formulas embedded in the SSES Sample Size Calculator, please provide all inputs required to calculate the effective, target, and original sample sizes as indicated in Question 9.**

Although the methodology and formula used in calculating the Original Sample Size remains constant, the values associated with the referenced variables changes on a yearly basis, based on the most current available data. The effective, target and original sample size formulas were constructed as described in question 9 but the specific inputs and calculations for the Federal Fiscal Year 2017 are described below:

**Effective Sample Size calculations:**

$$n_e = \left( \frac{z}{w} \right)^2 p(1-p)$$

Where  $z = 1.645$ ,  $w = 0.03$  (both  $z$  &  $w$  are based on 95% one-sided CI with tolerance of 3%) and  $p = 3\%$  over the target rate ( $20\% + 3\% = 23\%$ ). Solving,

$$n_e = \left( \frac{1.645}{0.03} \right)^2 .23(1-.23) = 532.5 \approx 533$$

**Target Sample Size calculations:**

The highest design effect was used.

Year	Complex Variance	Srs Variance	Stderr (Complex)	Stderr (SRS)	Deff
2004	0.000084463	0.000065663	0.00919	0.008103	1.29
2005	0.000093154	0.000074792	0.009652	0.008648	1.25

2014	0.000134009	0.000127929	0.011576	0.011311	1.05
2015	0.000121925	0.000102821	0.011042	0.01014	1.19

$$n_t = \text{Deff}_h \times n_e$$

$$n_t = 1.30 \times 533 = 693$$

#### Original Sample Size calculations:

The lowest eligibility rate occurred in 2010 and it was used for the calculations. The lowest completion rate of past surveys was 98%. Since this is extremely high, it was decided to use a completion rate of 80% instead.

Year	Eligibility Rate	Completion Rate
2004	71.0048	98.380
2005	67.959	98.742
2006	68.3353	99.404
2007	65.2002	99.568
2008	63.3803	99.829
2009	60.4425	99.643
2010	54.5362	99.721
2011	58.9648	99.638
2012	55.8624	100.000
2013	58.4312	99.726
2014	55.7028	99.065
2015	70.7359	99.758

Eligibility Rate: 55%

Completion Rate: 80%

$$n_o = \frac{n_t}{r_l r_c} + n_A + n_S$$

$$n_o = \frac{693}{(.55)(.80)} + 47 + 117 = 1739$$

**APPENDIX C:**  
**SYNAR SURVEY INSPECTION PROTOCOL SUMMARY**

## APPENDIX C: SYNAR SURVEY INSPECTION PROTOCOL SUMMARY

State: Pennsylvania  
FFY: 2017

*Note: Upload to WebBGAS a copy of the Synar inspection form under the heading “Synar Inspection Form” and a copy of the protocol used to train inspection teams on conducting and reporting the results of the Synar inspections under the heading “Synar Inspection Protocol.”*

### 1. How does the state Synar survey protocol address the following?

#### a. Consummated buy attempts?

- Required
- Permitted under specified circumstances (Describe:      )
- Not permitted

#### b. Youth inspectors to carry ID?

- Required
- Permitted under specified circumstances (Describe:      )
- Not permitted

#### c. Adult inspectors to enter the outlet?

- Required
- Permitted under specified circumstances (Describe: Safety of outlet determination)
- Not permitted

#### d. Youth inspectors to be compensated?

- Required
- Permitted under specified circumstances (Describe:      )
- Not permitted

### 2. Identify the agency(ies) or entity(ies) that actually conduct the random, unannounced Synar inspections of tobacco outlets. (Check all that apply.)

- Law enforcement agency(ies)
- State or local government agency(ies) other than law enforcement
- Private contractor(s)
- Other

List the agency name(s): The Department of Health and agencies under its jurisdiction.

3. Are Synar inspections combined with law enforcement efforts (i.e., do law enforcement representatives issue warnings or citations to retailers found in violation of the law at the time of the inspection)?

Always  Usually  Sometimes  Rarely  Never

4. Describe the type of tobacco products that are requested during Synar inspections.

a. What type of tobacco products are requested during the inspection?

- Cigarettes  
 Small Cigars  
 Cigarillos  
 Smokeless Tobacco  
 Electronic Cigarettes/Electronic Nicotine Delivery Systems (ENDS)  
 Other

b. Describe the protocol for identifying what types of products and what brands of products are requested during an inspection.

Inspectors are permitted to attempt to purchase smokeless tobacco when visiting retail outlets that frequently sell such a product, such as in rural areas of the state.

5a. Describe the methods used to recruit, select, and train adult supervisors.

Adult supervisors are recruited through Tobacco Prevention Control Primary Contractors, local tobacco prevention coalitions, schools, and other community organizations (i.e. scouts, YMCA, YWCA, after school programs).

5b. Describe the methods used to recruit, select, and train youth inspectors.

Youth inspectors are recruited through Tobacco Prevention Control Primary Contractors, local tobacco prevention coalitions, schools, and other community organizations (i.e. scouts, YMCA, YWCA, after school programs).

6. Are there specific legal or procedural requirements instituted by the state to address the issue of youth inspectors' immunity when conducting inspections?

a. Legal

Yes  No

*(If Yes, please describe.)*

Pennsylvania Act 2002-112 provides minors immunity when conducting Synar survey inspections or participating in tobacco enforcement compliance checks.

b. Procedural

Yes  No

*(If Yes, please describe.)*

**7. Are there specific legal or procedural requirements instituted by the state to address the issue of the safety of youth inspectors during all aspects of the Synar inspection process?**

**a. Legal**

Yes  No

*(If Yes, please describe.)*

**b. Procedural**

Yes  No

*(If Yes, please describe.)*

Youth safety is addressed in the comprehensive training protocol.

**8. Are there any other legal or procedural requirements the state has regarding how inspections are to be conducted (e.g., age of youth inspector, time of inspections, training that must occur)?**

**a. Legal**

Yes  No

*(If Yes, please describe.)*

**b. Procedural**

Yes  No

*(If Yes, please describe.)*

The Pennsylvania Department of Health conducts an annual training with field staff on the conduction of the Synar Survey. This training covers safety of youth inspectors, age of youth inspectors, time of inspections, completion of survey forms, and training of youth inspectors. Recruitment and training of youth inspectors is completed by Regional Primary Contractors and include role-modeling by youth.

## **ATTACHMENTS**

## Attachment 1: Calculation of Weighted Retailer Violation Rate Explanation

The following is an explanation of the program code used to obtain the RVR estimate and its standard error. The actual code is contained in Attachment2: Calculation of Weighted Retailer Violation SAS Programming Code.

### Program Overview

- (1) Raw survey data is imported.
- (2) Variable types are standardized (i.e., character or numeric).
- (3) Record level variables are created. Each record is coded as compete, incomplete, eligible and/or ineligible.
- (4) Cluster level totals are calculated.
- (5) Stratum level totals are calculated.
- (6) The *eligible* population for each stratum is estimated. The estimated number of eligible outlets per stratum (Elign) is determined with the following equation:

$$Elign = (Stsize) \cdot \left[ \frac{(Sampst - Ineligst)}{Sampst} \right]$$

- (7) A base weight for each observation is calculated. The base weight is the inverse of the probability of selection. Determining the base weight requires the calculation of the probability of selection where each outlet has a quantifiable probability of selection. The survey uses a stratified cluster design with the clusters being selected using PPS (Probability Proportionate to Size) sampling. In a complex design, the overall probability of selecting an outlet is the product of each stage's probability of selection. Therefore, the survey's probability of selection is the probability of selecting a cluster multiplied by the probability of selecting an outlet within the cluster. (See **NOTE: Probability of selection**)
- (8) A final weight is calculated for each observation. The final weight is an adjustment of the base weight to account for non-completions.

```
*****SAS Code*****  
Finalwt = (Weight * (Sampsize/Sampobs));  
*****
```

- (9) The weights are exported to be checked and verified.
- (10) A weight table is created.
- (11) The weight table and weight check table are exported.
- (12) The data is recoded and prepared for Proc Surveymeans.
- (13) The weighted statewide mean, standard error and confidence bounds are calculated using Proc Surveymeans which uses the Taylor expansion method to estimate sampling errors that take into account both the between cluster and the within cluster variances.
- (14) An unweighted statewide mean is calculated.
- (15) The results are outputted.
- (16) Data is prepared for Excel.
- (17) Data is exported to Excel.

## Attachment 1: Calculation of Weighted Retailer Violation Rate Explanation

### NOTE: Probability of Selection

Let,

$ProbCl$  = Probability of selecting a cluster,

$ProbOut$  = Probability of selecting an outlet within the cluster,

$ProbSt$  = Probability of selection for each outlet in the stratum,

$Nclust$  = Number of clusters in the stratum,

$CPS$  = Cluster population size,

$Elign$  = Eligible stratum population size,

$Sampsize$  = Sample size of the cluster,

Then,

$$ProbCl = (Nclust) \bullet \left( \frac{CPS}{Elign} \right)$$

$$ProbOut = \left( \frac{Sampsize}{CPS} \right)$$

$$ProbSt = (ProbCl) \bullet (ProbOut) = (Nclust) \bullet \left( \frac{CPS}{Elign} \right) \bullet \left( \frac{Sampsize}{CPS} \right) =$$

$$ProbSt = (Nclust) \bullet \left( \frac{Sampsize}{Elign} \right)$$

The Base Weight is the inverse of the probability of selection for each outlet divided by the total eligible outlets in the stratum (ELIGN). The base weight gives each sampled outlet a weight such that it sums to the number of eligible outlets in the state.

$$\text{Base Weight} = \frac{1}{\frac{(Nclust)(Sampsize)}{(Elign)}} = \frac{(Elign)}{(Nclust)(Sampsize)}$$

```
*****SAS Code*****  
Weight = (1/((Nclust * Sampsize) / (Elign)));  
*****
```

## Attachment 1: Calculation of Weighted Retailer Violation Rate Explanation

### Input and Output files used in the program

- (1) SynarResultXX.mdb (Input) – Database contains one record for every outlet sampled. The database is created from the data collected from the survey forms.
- (2) WeightsXX.htm (Output) – Table that lists all sampled clusters, outlet weights, cluster sample size, eligible sample and completed sample. Also includes a table that verifies that the weights add up correctly and shows the unweighted RVR. (Attachment3)
- (3) SurveyMeansXX.htm (Output) – table showing the statewide weighted RVR estimate, statewide standard error, statewide unweighted RVR, statewide frequencies, strata weighted RVR estimates, strata standard error and strata frequencies calculated using the SAS Surveymeans procedure. (Attachment4)
- (4) ResultTablesXX.xls (Output) – Excel tables created with the outputted data from the Surveymeans procedure. The tables contain the statewide weighted RVR estimate, statewide standard error, statewide frequencies, strata weighted RVR estimates, strata standard error and strata frequencies. (Attachment5)

### Permanent SAS datasets created

- (1) SynarXX.Rawinput – Permanent SAS dataset created from the raw survey data for additional analysis and comparisons to previous surveys. The dataset is used to create Form4, Form5 and to check the other forms of the Synar report. The dataset contains all records whether they are eligible, ineligible, completed or not completed. The variables are standardized so the variable types (i.e., character or numeric) are compatible with past variables. The variables Clnum, Sampob, Inelig and Elig are created and added to the dataset.
- (2) SynarXX.Weighted – Permanent SAS dataset containing one record for each eligible outlet. The weights are contained in this dataset.
- (3) SynarXX.Stratadat – Permanent SAS dataset containing strata level data. Used for additional analysis including Form1 of the Synar report.
- (4) SynarAll.RawXX – Permanent SAS dataset used in trend analysis.
- (5) SynarAll.StratXX – Permanent SAS dataset used in trend analysis.
- (6) SynarAll.WgtXX – Permanent SAS dataset used in trend analysis.

### Explanation of Variables

#### A. Variables inputted from the survey database

1. **Anum** – Numeric cluster identifier.
2. **Snum** – Numeric outlet identifier within cluster. Snum combined with Anum uniquely identifies each outlet.
3. **Outcome** – Compliance check result. Variable is coded 1 for a sale, 2 for a refusal and 3 for a non-completion.
4. **Noncomp** – Numeric variable used to classify the non-completed compliance checks.
  1. **Alcohol** – Numeric variable that identifies outlets that serve alcohol by

## **Attachment 1:** Calculation of Weighted Retailer Violation Rate Explanation

the glass and codes them with a 1 if they serve alcohol, 2 if they don't and 3 if it cannot be determined.

2. **BuyerAge** – Numeric variable that identifies the age of the youth surveyor and code them with a 1 if 15 years old, 2 if 16 years old and 3 if 17 years old.
3. **BuyerSex** - Numeric variable that identifies the sex of the youth surveyor and codes them with a 1 if male and 2 if female.
4. **BuyerHisp** – Numeric variable that identifies if the youth surveyor is of Hispanic origin and codes them with a 1 if yes and 2 if no.
5. **BuyerRace** - Numeric variable that identifies the race of the youth surveyor and codes them with a 1 if white, 2 if black, 3 if Asian and 4 if other.
6. **Adult** – Numeric variable that identifies whether the adult supervisor was in the outlet and codes them with a 1 if yes and 2 if no.
7. **AskAge** – Numeric variable that identifies whether the youth surveyor was asked their age and codes them with a 1 if yes and 2 if no.
8. **AskId** – Numeric variable that identifies if the youth surveyor was asked for identification and codes them with a 1 if yes and 2 if no.
9. **Warn** – Numeric variable that identifies if there were signs indicating selling to youth under the age of 18 is illegal and codes them with a 1 if yes and 2 if no.
10. **Clerksex** – Numeric variable that identifies the sex of the clerk and codes them with a 1 if male and 2 if female.
11. **Verifyloc** – Numeric variable that identifies if the adult supervisor verified the location fields provided on the survey form are accurate and codes them with a 1 if yes and 2 if no.

### *B. Outlet level variables created in the program*

1. **Elig** – Variable that identifies eligible outlets by coding each observation with either a 1 or a 0 depending on its eligibility.
2. **Inelig** - Variable that identifies ineligible outlets by coding each observation with either a 1 or a 0 depending on its eligibility.
3. **Sampob** – Variable that identifies completed observations by coding each record with either a 1 or a 0.

### *C. Cluster level variables created within the program*

1. **Sampsize** – The total number of outlets sampled per cluster.
2. **Eligs** – The total number of eligible (Elig) sampled outlets per cluster.
3. **Ineligs** - The total number of ineligible (Inelig) sampled outlets per cluster.
4. **Sampobs** – The total number of completed sample observations (Sampob) per cluster.

### *D. Stratum level variables created within the program*

1. **Sampst** – The total number of outlets sampled (Sampsize) per stratum.
2. **Eligst** – The total number of eligible sampled outlets (Eligs) per stratum.
3. **Ineligst** – The total number of ineligible sampled outlets (Ineligs) per stratum.

**Attachment 1:** Calculation of Weighted Retailer Violation Rate Explanation

4. **Nclust** – The total number of clusters per stratum.
5. **Elign** – The estimated number of eligible outlets per stratum.

## III. Survey Procedures

### Conducting a Valid Survey

Probability theory allows the use of well-defined segments (sample) of a population to estimate characteristics describing that population. Pennsylvania's Synar survey uses probability theory and a small sample of cigarette outlets to estimate the proportion of cigarette outlets which sell cigarettes to youth under the age of 18. Since a small sample is used to make inferences about the entire population, any errors or biases are magnified many times. To prevent inaccurate results and ensure the integrity and validity of the survey, surveyors must employ the following characteristics or follow the "SCRIPT".

**S**ecret **C**onsistent **R**igorous **I**mpartial **P**atient **T**enacious

**Secret.** Keep the survey a secret. The survey is "unannounced" and cannot be mentioned to the public for the entire survey period. Participants should not initiate conversations about their participation in this survey with persons outside the survey team, except for their parents. If asked about the survey, it is acceptable to explain that a yearly survey is conducted to estimate the rate that retailers sell cigarettes to minors, but do not give specifics of the sampled outlets or the timeframe of the survey.

**Consistent.** The same survey procedures must be followed throughout the state. Any variation in procedures will bias the survey results. Every store must be attempted in exactly the same manner. Strictly comply with the survey rules and procedures. An approximately equal number of inspections must be conducted by male and females throughout the state and a consistent distribution of male and female inspectors must be maintained from year to year to make valid year to year comparison.

**Rigorous.** Rigorously complete the Survey Report Form and all accompanying forms. The Survey Report form is the primary tool for the Synar survey. Properly complete all forms. The survey results are meaningless if the data on the form is inaccurate. Consult the manual or contact DSS (*see* **Figure 1**). Give detailed explanations, when they are required. The more information given, the easier it is to identify and correct problems.

**Impartial.** Remain impartial to the inspection outcome. Do not bias the outcome with your actions. A successful inspection is NOT achieved by enticing a sale or a refusal. A successful inspection is defined as one where the surveyor follows survey procedures and documents exactly what happened. Even though a high "Refusal" rate is desired, as surveyors it is your responsibility to be indifferent to the outcome of the inspection. Any actions taken to lower the violation rate are done before or after the entire survey period, not during the survey.

## Attachment 6: Inspection Protocol

**Patient.** Remain patient throughout the entire survey process. Surveys rely on many different people with many different personalities. Unexpected delays should be expected.

**Tenacious.** Don't quit until all eligible outlets on the list are inspected. If the outlet is eligible and safe, complete the inspection. The completion rate or the percent of completed eligible outlets is very important to survey validity. A low completion rate negatively affects the validity of the survey.

## Procedures for Attempting to Purchase Tobacco

### Checklist before Departure

- A list of outlets, directions and maps
- A Letter of Verification
- Cash for purchases
- Forms for recording the results of each compliance check
- Black ink pens (*no markers or pencils*)
- A plastic bag to hold the cigarettes purchased
- Parental permission slips for the youth participants

### Prior to Inspection (before entering the outlet)

#### *Adult supervisor:*

- Ensure the vehicle is parked out of site of outlet personnel.
- Evaluate the outlet for safety from the outside.
- Evaluate the outlet for eligibility. Although the outlet may be included on the sample list, locations inaccessible to the public (e.g., private clubs, prisons, and private homes) are not part of the survey, but must be accounted for on the Report Form and accounting forms. If there is a sign on the entrance stating that no one under the age of 21 or 18 is permitted, do not allow the minor to enter that outlet.

#### *Youth Participant:*

- Decide which brand of cigarettes will be attempted before entering the outlet.
- Decide on a similar back-up brand in the event that the first choice is not in stock.
- Carry more than enough money to cover the cost of the cigarettes.

### During Inspection

#### *Adult supervisor:*

- Enter the outlet before the youth.
- Evaluate the outlet for safety from the inside. If it is deemed unsafe, leave immediately and stop the youth from entering.
- Locate where cigarettes are located and look for warning signs.
- Observe the gender of the clerk.
- Determine whether the outlet sells alcohol for on-site consumption.

## Attachment 6: Inspection Protocol

- If the outlet sells alcohol, determine whether the cigarettes are sold from behind the bar.
- If the outlet is a non-completion, gather enough information to satisfy the collection forms.
- If budgeted, the adult can purchase a small item to appear inconspicuous.
- In some cases, the outlet may be too small for the adult to enter without tipping off the clerk. If the supervisor does not enter the outlet, an explanation is given on the Survey Report Form and Compliance Sheet.

### *Youth Participant:*

- Enter the outlet after the adult supervisor had enough time to establish that the inside of the outlet is safe.
- Attempt to purchase cigarettes.

Both the adult supervisor and the youth participant should appear as inconspicuous as possible in the outlet and not wear or carry anything that will make them stand out. Do not take the data collection forms or note pads into the outlet.

### **Post Inspection (After leaving the outlet)**

#### *Adult supervisor:*

- Immediately after exiting the outlet, complete the Survey Report Form with the youth. Instructions for completing the form are located in Appendix 1 of this manual.
- After each sale, attach a label to the cigarettes purchased, with the name and address of the outlet and the date on it. Place the purchase in a plastic bag.
- Discuss the experience with the youth.

#### *Youth Participant:*

- Assist the adult with the Survey Report Form.
- Discuss your experience with the adult and voice any concerns.

## General Survey Procedures

- ◆ Synar survey uses “**Address Based Sampling.**” When an address is visited and the business name is different than what is listed on the sample list, inspect the outlet at the address, regardless of the name.
- ◆ If the youth participant enters a sampled outlet that is accessible to minors and finds that it only sells cigarettes through a **vending machine**, the youth participant **must** attempt to buy cigarettes from the vending machine.
- ◆ Make only **one attempt** to purchase per outlet.
- ◆ Adult supervisors will not wear **uniforms** or visible forms of **identification**.

## Attachment 6: Inspection Protocol

- ◆ Youth participants will not wear clothing that could be perceived as "gang related".
- ◆ Youth participants will *not* take their **IDs** into the outlets.
- ◆ Serving **alcohol** is NOT a valid non-completion reason. An outlet is NOT inaccessible just because it serves alcohol.
- ◆ Youth participants will *not* attempt to purchase cigarettes if someone in the outlet **knows them**. The outlet must be revisited at another time.
- ◆ **Survey procedures** must be the same for every outlet. A **script** should be followed when attempting to purchase cigarettes to avoid biasing survey results.
- ◆ Youth participants will **answer all questions honestly**. If the clerk asks for whom the cigarettes are being purchased, the youth is to respond "me".
- ◆ The youth participant will give his/her **age** accurately, if asked by the clerk. It is against the law to knowingly and falsely represent oneself to be 18 years of age or older to purchase cigarettes.
- ◆ **Do not argue with the clerk**. If the clerk refuses to sell to the youth participant, leave the outlet quietly and do not argue or try to persuade the clerk to sell.
- ◆ **Complete the entire sample list**. It is very important to attempt every outlet on the sample list. The completion rate is an important aspect of any survey.
- ◆ **NEVER use youth under the age of 15**.
- ◆ The definition of a "**Sale**" is when money changes hands and the youth leaves the counter with cigarettes OR the youth obtains cigarettes from a vending machine, the transaction is considered a "sale", even if the employee follows the youth outside and demands that they return the cigarettes.
- ◆ A **refusal** is when the youth asks for cigarettes and is refused by the clerk.
- ◆ A **non-completion** is when the youth does not have the chance to attempt to buy cigarettes because of one of the non-completion reasons described in Appendix 2.
